

NERI

Making available our know-how and our culture, collaborating with draughtsmen, architects and lighting designers to create unique outdoor lighting and urban decoration projects worldwide, a sign of distinction that stands the test of time.

THE COMPANY

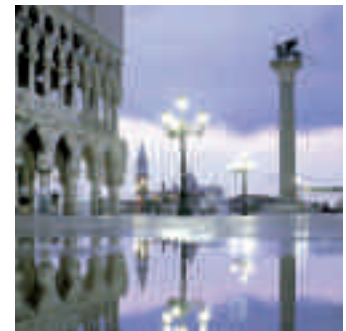

Since 1962 Neri is the symbol of excellence in high-end outdoor furniture and lighting systems in Italy and worldwide. Over half of the Italian municipalities, and hundreds of international designers are already familiar with the hallmark of Neri's brand, whose constant message has always been, and continues to be, **stylistic innovation and technological research in keeping with environmental and human sustainability.**

Founded by Domenico Neri, artist, sculptor, and an attentive observer and interpreter of the aesthetic and functional demands of the cities, starting from their heart, the historic centers, Neri promotes a twofold proposal: continuity of its classical style in the Heritage collection, and evolution of its ideals of design and function in the Contemporary collection. Restoration activities, reproductions, customized urban integration projects, as well as partnerships with architects, lighting designers and energy managers, are part of the offering of a company with a presence in over 100 countries around the world, which since 50 years has been a symbol of ingenuity and passion.

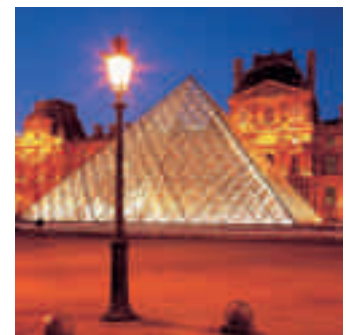

NERI SMART SYSTEM

Energy saving and systems to control lighting, in relation to environmental policy, traffic regulation, and managing the territory. This is the Neri Smart System - technology developed for intelligent light & energy management and control.

The use of sensors that are fully integrated with the design for Neri products makes it possible to regulate light levels to suit ambient conditions, traffic or time slots. Alarm messages can be sent to the emergency response teams, activated by sensors that detect incidents. HD video cameras can be integrated, and WI-FI services diffused. The entire system can be controlled and programmed through internet, using a simple web interface that is accessible everywhere. We have been working on making our cities more beautiful for 50 years, Now we want them to be more liveable and intelligent.

OUR CHALLENGE

The real Made-in-Italy, high-range line all over the world It's our challenge: bringing together tradition and design with technological innovation and energy saving. The artistic touch of our designer, such as Domenico Neri and Makio Hasuike, merged with the high-tech profile of ours labs.

Our free, multi-disciplinary documentation, unfettered experimentation, enquiring, and passionate study of everything related of lighting, planning and urban furnishing, have seen Neri come to the fore in the world due to both shapes and contents. Here light and material are studied and measured on a daily basis. How they relate to their setting and future technological developments are constantly applied to requests coming from outside the company and from the markets. This is done using tools that play a key role in the planning stage as well.

Highly sophisticated equipment that is unique in different ways: such as one of the largest and fastest goniophotometers in use in Europe, which makes it possible to test the lighting performance of products and to check compliance to restrictive regional norms on light pollution. We also have a "Light room", a test set that is the most attractive and technologically advanced at Neri – a type of wind tunnel through which light "blows".
