TOTAL RAILINGS

La ringhiera facile

L'elemento ad attacco verticale può essere scelto tra una vasta gamma ed essere inserito in pannelli finiti pronti per l'installazione. È così possibile creare unità modulari per soddisfare qualsiasi esigenza di lunghezza e forma indipendentemente dall'uso in balconi, recinzioni o cancelli. Modus fornisce così il telaio portante completamente adattabile che permette al cliente di risparmiare tempo e denaro. I pannelli sono forniti completi di: elementi decorativi in ghisa (vedi pag. 92) montati su profili in acciaio zincati a caldo, il tutto verniciato di colore grigio Modus. Bulloneria in acciaio inox. Paletti ed accessori di fissaggio da ordinare separatamente.

The easy railing

Components with a vertical joint can be selected from a vast range of items, and are then fitted to finished panels, ready for installation. This makes it possible to create standard modular units to cater for all needs of length and form for balconies, fences or gates. Modus therefore supplies a completely adaptable frame, allowing customers to save time and above all money. Panels are supplied complete with: decorative elements in cast iron (see p. 92) mounted on hot-galvanized steel profile bars, fully painted in Modus grey. Bolts and other fasteners in stainless steel. Posts and fixing accessories to be ordered separately.

La rampe facile

L'élément à fixation verticale peut être choisi dans une gamme très variée puis être ajouté à des panneaux finis, prêts à l'installation. Ceci permet de créer des unités modulaires standard pour répondre aux exigences de longueur et de forme les plus diverses, indépendamment de leur application sur balcons, clôtures ou portails. Modus fournit ainsi le châssis portant complètement adaptable, permettant au client d'économiser du temps et surtout de l'argent. Les panneaux fournis comprennent: éléments décoratifs en fonte (voir pag. 92) montés sur des profilés en acier zingués à chaud, le tout peint en couleur gris Modus. Boulonnerie en acier inox. Barres et accessoires de fixation à commander séparément.

Das einfache Geländer

Die einzelnen vertikalen Elemente können aus einer breiten Palette ausgewählt und in fertige Paneele eingefügt werden, die einfach zu installieren sind. So ist es möglich, modulare Standardeinheiten zu schaffen, die alle Ansprüche hinsichtlich Länge und Form unabhängig von der Verwendung für Balkone, Umzäunungen oder Tore zufrieden stellt. Modus liefert den vollständig anpassbaren tragenden Rahmen, der dem Kunden erlaubt, Zeit und allem Geld zu sparen und unsere Geländer zu genießen, die modernes Design mit klassischem Stil verbinden. Die Paneele werden vollständig geliefert mit: Dekorationselementen aus Gusseisen (siehe Seite 92), die auf heiß verzinkte Stahlprofile

montiert sind, alles lackiert in Modus-Grau. Schrauben und Muttern aus Edelstahl. Pflöcke und Befestigungszubehör müssen gesondert bestellt werden.

La barandilla fácil

El elemento de fijación vertical se puede elegir dentro de una amplia gama y ser introducido en paneles acabados listos para su instalación. De esta forma se pueden crear unidades modulares estándar para satisfacer cualquier necesidad de longitud y forma, independientemente del uso, en balcones, cercados o cancelas. Modus suministra, pues, un bastidor sustentante completamente adaptable que le permite al cliente ahorrar tiempo y sobre todo dinero. Los paneles se suministran con: elementos decorativos de hierro colado (ver pág. 92) montados en perfiles de acero galvanizados en caliente, todo ello pintado de color gris Modus. Pernos de acero inoxidable. Barrotes y accesorios de fijación (que deben encargarse por separado).

Le Chassis
Der Rahmen
El Bastidor

Una volta effettuata la scelta, Modus provvede ad assemblare tutti i componenti in un telaio fino a formare il vostro pannello.

After the elements have been chosen, Modus assembles all components in a frame to complete your panel.

Une fois le choix effectué, Modus assemble tous les éléments sur un châssis pour composer votre panneau.

Nach der Auswahl stellt Modus alle Komponenten für den Rahmen zusammen, so dass Ihr Paneel entsteht.

Una vez elegido el modelo, Modus se encarga de ensamblar todos los componentes en un bastidor hasta formar su panel.

Il pannello completo
Complete Panels

Komplette Paneele
El panel completo

Si ottiene così un pannello completo, una unità modulare e adattabile che risponderà ad ogni vostra richiesta ed esigenza.

The result is a finished panel, a modular and adaptable unit that will satisfy all your requests and needs.

Le panneau complet obtenu forme une unité modulaire et adaptable en mesure de répondre à toute demande et à toute nécessité.

So entsteht ein komplettes Paneel als modulier- und anpassbare Einheit, die Ihren individuellen Anforderungen gerecht wird.

De esta manera se consigue un panel completo, una unidad modulare y adaptable que responderá a todas sus necesidades y exigencias.

La modularidad y la adaptación

L'installazione viene composta da pannelli standard più pannelli di adattamento, realizzati su misura, per il completamento del perimetro che si vuole ottenere.

The installation is composed of standard panels together with special customized panels that complete the desired railing.

L'installation se compose de panneaux standards et de panneaux d'adaptation, réalisés sur mesure, pour compléter la partie voulue.

Die Installation wird aus Standard-plus Anpassspaneelen zusammengestellt, so dass Ihr Wunschgeländer nach Maß entsteht.

La instalación se compone de paneles estándar y paneles de adaptación, hechos a medida, para completar el perímetro que se desee cubrir.
